

## Industry Problems:

- Consistent quality surveillance of Banks' ATM machines/branch banks.
- Prevention of fraud and theft in banking transactions.
- Prevention of theft and robbery.
- Elimination of human error in financial transactions.
- Maintaining sufficient video records of transactions for long periods of time.

IC Realtime provides a broad range of digital video management solutions that can serve the need for quality and reliability, as well as the large video storage capacity needed in the financial and banking industry.

IC Realtime's Professional line of DVRs are easy to install and use, so even personnel that are not security professionals can operate the system without the large learning curve faced by many other popular digital video recorders.

Teller window transactions can be monitored, with instant retrieval of incidents all with audio and video synchronized on all channels. ATM video surveillance and security can be enhanced by a transaction text software interface.

Recording schedules (day, night, weekend) and motion detection are available to allow for maximum recording storage. IC Realtime DVRs have an industry leading 4 Terra bite of internal storage which can mean months worth of Realtime recording.

Remote monitoring capabilities on LAN, WAN, and internet provide surveillance from desktop computers, giving management and security personnel the ability to view multiple locations without having to leave their offices. All video recordings are captured with digital encryption, so that video is tamper-proof, providing important evidence when combating theft.
