

Industry Problems:

- Increased school campus violence.
- Ongoing struggles with vandalism and theft.
- Prevention of unwanted visitors into school buildings.
- Maintaining a feeling of safety among students and teaching personnel.
- Tightened school and university budgets.

IC Realtime Security Products provides a broad range of digital video solutions that enable campus safety directors and/or school security personnel to monitor school campuses easily at a cost that shrinking school budgets can afford.

Our DVRs are easy to install and use, so that training times are kept to a minimum, and even non-security professionals can be comfortable with their operation. We have special security features that allow administration to limit what others see while never interrupting the actual recording. We also have three levels of access into the DVRs so that only upper management can see sensitive video information.

To get the best view of your campuses, most major manufacturer dome protocols are available in all of our DVRs units providing for seamless integration with existing systems. Remote video access allows monitoring from computers to ensure that potential problems can be detected before they escalate. An alarm can also notify key personnel of an intruder on school property during off hours. Event or motion detection recording maximizes recording storage, while making retrieval of incidences easy and instantaneous. All recording is digitally encrypted, so that video evidence is tamperproof.
